8. Discussion Expectations

Discussion	Expectations
TA All Hands	This discussion is to promote the development of ideas and integrations at the TA level. This also provides time to develop an up-to date consensus on requirements from the other TAs. The intent is to discuss the agreed ideas and integrations on day 2 during the TA Collaboration discussions.
TA Collaboration	This time is to be used to collaborate with the other TAs. Use this time for idea and integration development or to discuss what your TA needs from other TAs as we wrap up phase 1 and we move into the first half of phase 2. Questions to Consider: • What data and analysis results do you need between your TAs? • What is the expected data format? • How can we best integrate? (ex. GPC, Gitlab)
Performer Working Sessions	• Development time for ideas and integrations • Participating in the devices room • Working on challenges sets from IV&V • Collaborating with more specific performers, IV&V, and ARPA-H
Demo	• Provide updates on your current technical progress • Communicate collaboration and integration ideas discussed at the Hackathons • Future Hackathon suggestions
IVV 1:1s	Discuss challenge sets, metrics, and the first IVV event
IVV Focus Meeting	To prepare, please select 1–2 notional disruption scenarios from the list below, or propose a similar alternative if another scenario better highlights your platform/capabilities: • a vulnerable device class is identified on a network segment • a device on a shared subnet may require segmentation/filtering that could affect neighboring systems • a rogue, unmanaged, or misclassified device appears in the environment • a patch is available, but staffing and maintenance windows constrain deployment • a temporary mitigation is available, but its operational side effects are uncertain • a topology change or partial network partition affects device visibility/connectivity

- a critical device enters a degraded-but-not-failed state following disruption

For each selected scenario, please come prepared to discuss and/or show:

- what your platform would surface,
- what an operator would see,
- what action you would recommend,
- and what tradeoffs, assumptions, or uncertainties matter.

Artifacts can take whatever form is most natural for your team (e.g., screenshots, mockups, workflows, reports, slides, or short live demonstrations)

9. TA-Wide Meeting Schedule

Meeting	Day	Time	Room
TA1 All-Hands	Day 1	9:30 – 10:30 AM	Room 112
